

Exp 2 Trivy → Docker ContainerizationInstallation

```
sudo apt install trivy -y
```

```
trivy --version
```

Start

① `trivy image <name>:tag`

② not on docker → `trivy image --input <path>`  
 ↳ or first load on docker → docker load

③ `trivy image --severity HIGH, CRITICAL <name>`  
`--format JSON`

Exp 4 Dataset analysis (Linux And)

```
unzip data.zip
```

```
ls -lh → detail info
```

`head -1 data.csv` → first line of data

`head -1 data.csv | awk -F',' '{ for(i=0; i<NF; i++) print($i) }'`

Count no of  
columns

wc -l

↳ count no of  
row

sep by ,  
and print  
line by line

\* tail -n+2 data.csv | wc -l

↓  
first header nayo

\* head -n-2 data.csv |

↓  
last 2 line  
nayo

⑧ head -2 → second row (or first data)  
tail -1 → last row

⑨ grep "COVID-19" data.csv | head -1 | awk

↓  
count no  
of lines having  
that word.

→ first record having  
record COVID-19

↓  
format  
print.

⑩ grep -o "COVID-19" data.csv

↓  
first match  
text  
print

↓  
output no of times  
word is seen

grep -i  
insensitive  
case.

grep -E "abc|xyz"  
→ multiple  
regex  
| sort |

⑪ tail -n+2 data.csv | awk -F ',' '{print(\$2)}' | uniq

↓  
sort work

↓  
uniq

↓  
wc -l.

DATE

PAGE

2

⑦ tail -n+2 data.csv | awk -f ' ' \$22="en" {print \$2} |  
sort | uniq -c | sort -nr | head -10 | awk '{print \$2}'  
↓ ↓  
unique descending  
occurrence order  
count
